

Breast Cancer Image Classification

Author: Aaron Cherry

Table of Contents

Introduction

"About 1 in 8 U.S. women (about 13%) will develop invasive breast cancer over the course of her lifetime." "The overall death rate from breast cancer decreased by 1% per year from 2013 to 2018. These decreases are thought to be the result of treatment advances and earlier detection through screening." — BREASTCANCER.ORG

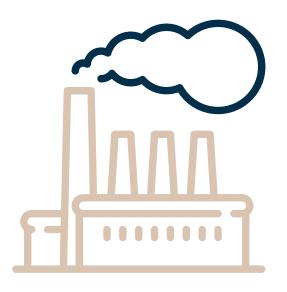

- Digitize Biopsy Slide
- Present analytics reports
- Pinpoint key features
- Natural next steps?

Benefit of Prediction Models

- Predict in bulk
- Cut time/cost of testing
- Sometimes more accurate than trained eye
- Augmenting current practices

Modeling

Data

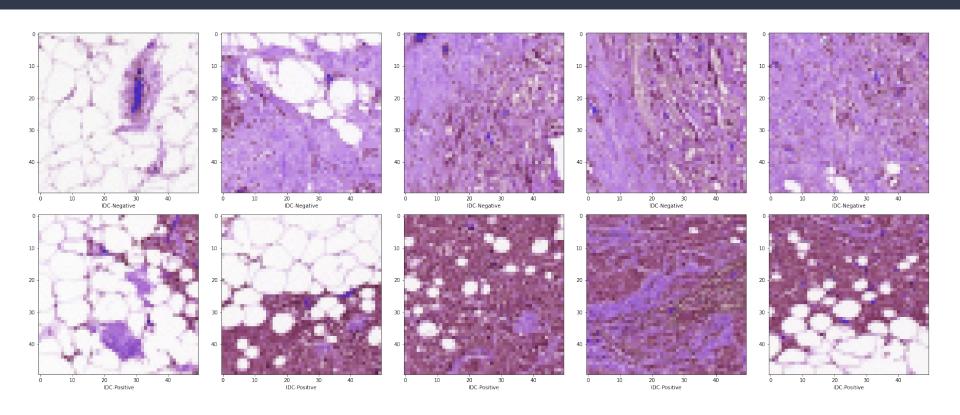

Kaggle (Case Western Base Study)

- Invasive Ductal Carcinoma (Breast Cancer)
- 837 whole slide scans
- 50x50 pxl images (~280k)

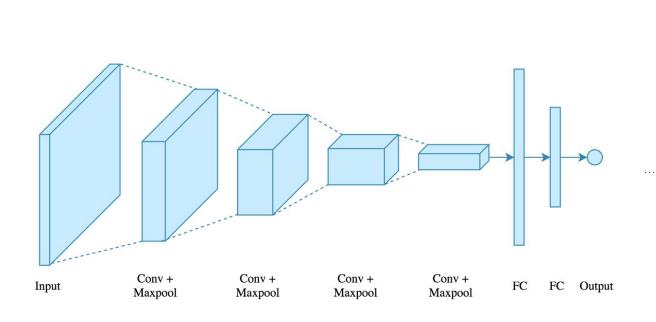

Classes

- IDC Positive
- IDC- Negative

Graphs

	Model Numbers
Accuracy	bad
Precision	terrible
Recall	worse
Precision	meh

Lung

Venus has a beautiful name, but it's terribly hot

Kidneys

istics on breast Despite being red, Mars is del predictions actually a cold place

Might be better to have statistics on breast cancer here to compare model predictions with.
